1% / year

**PERFORMANCE FEE**  
25% on capital gains every 12 months

### LIQUIDATION TERMS

According to CHAINWAYS General Terms and Conditions.  
Withdrawal allowed after lock-in period expires.

## RISK VS GAIN

Being a relatively new and largely unregulated market, investment into digital currency and blockchain projects is classified as a risk investment. While CHAINWAYS has a proven track record and demonstrated high capability for trading and investing in digital currency, this is by no means a guarantee for future performance. However, the conservative approach of keeping funds in reserve to balance out effects of a single unsuccessful trade reduces risk significantly.

## Leverage Trading

In crypto trading, leverage refers to using borrowed capital to make trades. Leverage trading can amplify your buying or selling power, allowing you to trade larger amounts. So even if your initial capital is small, you can use it as collateral to make leveraged trades. While leveraged trading can multiply your potential profits, it is also subject to high risk - especially in the volatile crypto market.

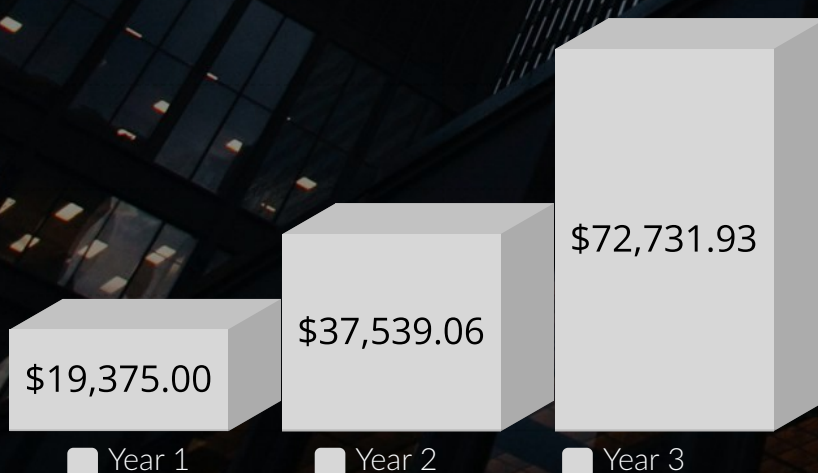

The amount of leverage is described as a ratio, such as 1:5 (5x), 1:10 (10x), or 1:20 (20x). It shows how many times your initial capital is multiplied. For example: a trader buys assets worth \$10,000 with own capital of \$1,000 and borrowed capital of \$9,000. This means he is trading with a Leverage of 1:10. After a leveraged position is closed, the borrowed capital is returned to the broker and the trader keeps any profits.

Traders use leverage to increase their position size and potential profits but also to enhance the liquidity of their capital.

Leverage allows you to get started easily with a lower initial investment and the potential to bring higher profits.

**Projection for a period of 3 years with principal of \$10,000, commissioned every twelve months**
